

CESSNA 120, 140

MICRO Vortex Generator Kit

The **MICRO Vortex Generators** for the Cessna 120 and 140 are now FAA STC approved and ready for installation on your airplane. This jet age technology provides a 9% reduction in stall speed, improved aileron response, reduced landing and takeoff roll.

"In looking back over the Cessna 140 era I am awed by the utter simplicity of the airplane, its sparkling flying qualities, its low initial price and operating costs, its durability, and its classical beauty. More importantly, it established Cessna Aircraft Company as the world leader in the General Aviation market."

~ William D. Thompson, "Cessna Wings for the World".

The DER Test Pilot says, "It just flies better with VGs, a very definite improvement."

The **Micro VG Kit** consists of 68 Vortex Generators mounted on the wings, just aft of the leading edge and 28 Vortex Generators mounted on the underside of the horizontal stabilizer. The kit includes the STC, detailed drawings and instructions, templates for positioning VGs, spares, Loctite Depend adhesive and all the materials needed for the easy one day installation except a bottle of isopropyl alcohol, a ladder and a roll of paper towels.

The **Micro Vortex Generators** are manufactured under our FAA PMA from aircraft grade 6063-T6 aluminum, alodined to a Boeing mil-spec, ready for painting. Each VG is curved on the bottom to fit the contour of the wing.

When placing your order for a **Micro VG Kit**, please provide the Serial Number and N-Number. We can ship the same day if your kit is ordered Alodine, ready to be painted. We can paint the VGs to match your airplane for an additional \$200 per color. Painted kits will ship within 3 days. Amex, VISA, MasterCard, Discover and COD orders accepted. Please call for further information.

- **Reduced STALL SPEED 9%!**
- **Improved Ailerons**
- **Improved Crosswind Control**
- **Improved Controllability**
- **FAA STC Approved**
- **Easy One Day Installation**
- **Kit Price \$695 plus S&H**
