

Cessna 310i and 310J

MICRO Vortex Generator Kit

	Factory	MICRO
V_{mc}	87 MPH	77 MPH
V_{so}	79 MPH	74 MPH

The **MICRO Vortex Generators** for the Cessna 310i and 310J are FAA STC approved and ready for installation on your airplane. This jet age technology provides virtual elimination of V_{mc} , a dramatic improvement in characteristics, reduced stall speeds, reduced approach speeds, reduced accelerate/stop distance, and improved safety.

The **Micro VG Kit** consists of 92 vortex generators mounted on the wings, just aft of the boot line and on both sides of the vertical stabilizer, plus four strakes on the inboard and outboard sides of the engine nacelles, similar to the strakes which Cessna puts on the 303 Crusader. Included are the STC, installation tools, detailed drawings and instructions, templates for positioning VGs, spares, Loctite AA 330 adhesive and all the materials needed for the easy one day installation.

The **Micro Vortex Generators** are manufactured under our FAA PMA from aircraft grade 6063-T6 aluminum, alodine to a mil-spec, ready for painting.

As one Cessna 310 owner said, "The **Micro VGs** do everything you said they would do and more -- the tail of my 310 thinks it's four feet taller and the rudder thinks it's two feet longer!"

When placing your order for a **Micro VG Kit**, please provide the Serial Number and Registration Number. We can ship the same day if your kit is ordered Alodined. An option for pre-painted VGs is available for an additional charge. Amex, VISA, MasterCard, Discover and COD orders accepted. Please call for further information.

- **Reduced V_{mc} , V_s , V_{so}**
- **Easy One Day Installation**
- **Improved Controllability**
- **Improved Stall characteristics**
- **Kit Price \$2145 plus S&H**
