

CESSNA 336 Skymaster

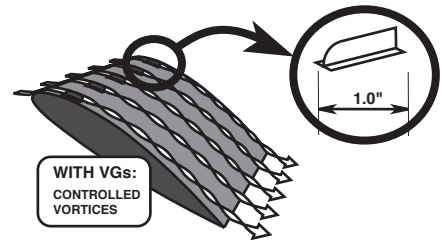

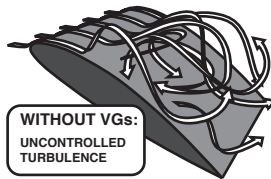

MICRO Vortex Generator Kit

LOWER STALL SPEEDS

Up:	15% Reduction
1/3:	9% Reduction
Full:	8% Reduction

T337H Flown Forward CG

The **MICRO Vortex Generators** for the Cessna 336 and 337 Skymaster are now FAA STC approved and ready for installation on your airplane. This jet age technology provides a reduction in stall speed, improved aileron response, reduced landing and takeoff roll. Most important is the improved controllability at slow speeds.

FAA Test Pilot says this about Micro VGs :

- "Flies a lot better with VGs"
- "Roll control is much better, with greatly improved aileron authority"
- "Lighter elevator force; ---- without VGs the elevator was heavy"
- "Tells you what it's going to do; ---- very good aerodynamic warning"
- "Aft CG handling improved, great improvement here"

The **Micro VG Kit** consists of 92 Vortex Generators mounted on the wings, just aft of the leading edge, 76 Vortex Generators mounted on both sides of both vertical stabilizers and 40 Vortex Generators mounted on the underside of the horizontal stabilizer. Included are the STC, detailed drawings and illustrated instructions, templates for positioning VGs, spares, Loctite AA 330 adhesive and all the materials needed for the easy one day installation.

The **Micro Vortex Generators** are manufactured under our FAA PMA from aircraft grade 6063-T6 aluminum, alodined to a mil-spec, ready for painting.

When placing your order for a **Micro VG Kit**, please provide the Serial Number and Registration Number. We can ship the same day if your kit is ordered Alodined. An option for pre-painted VGs is available for an additional charge. Amex, VISA, MasterCard, Discover and COD orders accepted. Please call for further information.

- **Reduced Vs, Vso**
- **More Stable Instrument Platform**
- **Smoother Ride in Turbulance**
- **Improved Controllability**
- **FAA STC Approved**
- **Easy One Day Installation**
- **Kit Price \$2145 plus S&H**
