

# Cessna 310G and 310H

## MICRO Vortex Generator Kit

	Factory	MICRO
V <sub>mc</sub>	80 MPH	69 MPH
V <sub>so</sub>	76 MPH	73 MPH

### About MICRO Vortex Generators:

The **MICRO Vortex Generators** for the Cessna 310G and 310H are FAA STC approved and ready for installation on your airplane. This jet age technology provides virtual elimination of V<sub>mc</sub>, a dramatic improvement in characteristics, reduced stall speeds, reduced approach speeds, reduced accelerate/stop distance, and improved safety.

The **Micro VG Kit** consists of 92 vortex generators mounted on the wings, just aft of the boot line and on both sides of the vertical stabilizer, plus four strakes on the inboard and outboard sides of the engine nacelles, similar to the strakes which Cessna puts on the 303 Crusader. The **Micro VG Kit** includes all of the installation tools and materials for your shop to make the easy one day installation.

The **Micro Vortex Generators** are manufactured under our FAA PMA from aircraft grade aluminum and are alodined to a mil-spec.

As one Cessna 310 owner said, "The **Micro VGs** do everything you said they would do and more -- the tail of my 310 thinks it's four feet taller and the rudder thinks it's two feet longer!"

When placing your order for a **Micro VG Kit**, please provide the Serial Number and N-Number. We can ship the same day if your kit is ordered Alodine, ready to be painted. We can paint the VGs to match your airplane for an additional \$250 per color. Painted kits will ship within 3 days. Amex, VISA, MasterCard, Discover and COD orders accepted. Please call for further information.

- Reduced V<sub>mc</sub>, V<sub>s</sub>, V<sub>so</sub>
- Easy One Day Installation
- Improved Controllability
- Improved Stall characteristics
- Kit Price \$1950 plus S&H
